

FOR IMMEDIATE RELEASE:

APC Automotive Technologies Launches New Diesel and Power Generation Program for Light, Medium and Heavy Duty Commercial Vehicles

- Offers convenient, single sourcing for exhaust, aftertreatment and brake parts

Las Vegas, NV – APC Automotive Technologies, LLC (APC), a leading supplier of automotive, light truck, and heavy-duty replacement parts, has just launched its new replacement parts category program for light, medium and heavy-duty commercial vehicles. The complete offering, covering all classes of commercial vehicles, now includes a wide range of high quality manufactured components from APC's DieselTech™ (exhaust and emissions), recently acquired DuraFit™ (aftertreatment) and Centric® Parts (brake systems) brands.

The announcement was made in advance of the Heavy Duty Aftermarket Week tradeshow (Booth #1405) by APC Automotive Technologies CEO, Hugh Charvat, who noted, "We are very excited about our new on/off-highway Diesel and Power Generation offerings and the many advantages and benefits they offer to both fleets and independent operators. Whether our customers operate Class 7 or 8 vehicles over the road or smaller-class, lighter-duty trucks locally, we have created a very convenient, single source for replacement exhaust, aftertreatment, and brake parts that will help keep their capital equipment profitable and on the road longer."

APC's new program incorporates an exceptional product offering from three of the industry's leading under-truck parts brands:

- **DieselTech**, a complete line of medium and heavy-duty exhaust and emissions replacement parts.
- **DuraFit**, the industry's leading full line supplier of EPA certified, exact-fit, OEM equivalent heavy-duty replacement diesel particulate filters (DPFs) and diesel oxidation catalyts (DOCs).
- **Centric Parts**, North America's leading manufacturer and supplier of aftermarket brake system components, including a recently launched air disc brake program as well.

Henry Hippert, Vice President of Sales, added, "Our replacement parts combine advanced engineering, innovative enhancements, and upgraded materials that are designed to improve vehicle performance and reliability. As the industry's first fully-integrated manufacturer, we test and manufacture all of our components to meet the most stringent standards so we can ensure that we exceed our customers expectations for a quick and easy installation and long service life."
